

Wetting Resin

- Reduces stickiness – lets instruments glide smoothly without pull-back
- Improves adaptation – sculpts material seamlessly into margins, line angles, and interproximals for tighter contacts and fewer voids
- Saves chair time – smoother pre-cure surface speeds sculpting & finishing, reducing contouring and polish time
- Thin, light-curable film – co-polymerizes with composite; leaves no residue to wipe off
- Universal compatibility – works with all methacrylate-based composites (micro/nano-hybrids, bulk-fills) and common instruments
- Unfilled and solvent-free
