PROFESSIONAL

PERIO ORAL RINSE

PERIO TREATMENT
0.63% STANNOUS FLUORIDE

DIRECTIONS: Use As Directed

Adults:

Rinse each day after usual brushing and flossing or more often if your dentist recommends additional therapy based on the diagnosis.

1. Push down on pump twice or pour the concentrated rinse to the 1/8 fl. oz. mark on the mixing vial.
2. Add water to the 1 oz. line, close tightly with snap-on cap and shake well. This prepares a 0.1% Stannous Fluoride rinse.
3. Rinse with one half of the solution for one minute, expectorate (spit) and repeat the procedure with the remaining half of the mixture.

Do not swallow, and do not rinse your mouth.

Rinse mixing vial with water after each use.
