

NoGag Oral Care - For Dental

Anti-gagging oral care made Smart, Simple, Stress-Free.

- Suppresses the gag reflex within 10 seconds, lasts for 60 minutes.
- Offers stress-free procedures for the patient, hygienist, and dentist alike.
- Provides a unique competitive advantage for the dental practice; increases patients, procedures, and referrals.

The NoGag™ experience sets a practice apart, helping attract new patients and increase procedures while improving care and reducing stress. Even existing patients with a mild gag reflex become powerful referrals when their best visits happen at your practice.

- NoGag is a powder-based swallowing aid that suppresses the gag reflex within 10 seconds and lasts for 60 minutes. It is a proprietary blend of common food-grade ingredients placed directly on the top 1/3 anterior of the tongue.
- 100% of patients tested would recommend it. NoGag = better patient care and a calmer patient experience.
- Helps reduce patient anxiety and fear of dental procedures due to gagging. Up to 8% of patients experience gagging every time they visit the dentist, and 50% of dental patients have had at least one such episode.

Great for patient care, great for your bottom line.
NoGag oral care: Try it once, create a Patient for Life™

- Safe for all ages.
- Allergen free.
- One pouch contains (20) single serving packets.

NoGag = No limits for your practice and great care for patients

"I just had an amazing conversation with one of my hygienists. Turns out she avoids cleanings because she hates/gags on X-rays.

Overall, I search for opportunities that allow me to impact quality of life. When it became clear to me that this product has the potential to significantly improve the comfort of dental patients when they visit the dentist, my interest was piqued. If it reduces their fear, it has the potential to improve their oral health, their systemic health, and the overall population's health."

Thomas W. Wegner, DDS
Town & Country Dental

A circular graphic with a blue border. Inside the circle, there is a photograph of a dentist wearing a white coat and a face mask, looking down at a patient. The patient is a woman with her mouth open, appearing to be in a dental procedure. Overlaid on the photograph is the text "50% of patients have had at least one episode of gagging at the dentist." in a bold, dark blue font.

50% of patients have had at least one episode of gagging at the dentist.
