

# Injectable Nano-Hybrid Flowable Composite

- Light-cured, high-viscosity flowable composite for direct restorations with uniform nano-fillers that deliver enhanced strength—even for occlusal surfaces
- Exceptional physical properties with thixotropic handling, low extrusion force, and no stringing for smooth, controlled placement
- Strong enough to replace conventional composite in select applications while maintaining excellent gloss retention and durability
- Indicated for Class I–V restorations, base/liner use, undercut filling, and repair of composite or ceramic restorations

2.5g x 2 syringes
